UNITED STATES GOVERNMENT

Memorandum

772

TO : Chief, Disease Control Branch
: Division of Dental
Public Health and Resources

DATE: January 10, 1962

Refer to: DPR-DC

FROM : Sanitary Engineer Director
Division of Dental Public Health and Resources

SUBJECT: Optimum Fluoride Levels

Dr. Russell told me today that negroes in Grand Rapids had twice as much fluorosis as others - (indicat~~es~~^{ed} of 0.15 vs 0.35). In a community with a larger number of negroes (say in DeKalb County, Georgia) would this tend to change our optimum fluoride levels? Would this observatin indicate more studies in case opponents use this finding?
