

A **6. Poisoning the well**
(Tune: My bonnie lies over the ocean)

Has fluoride been put in your water?
Is fluoride a treat or a trick?
Has fluoride been put in your water?
Could fluoride be making you sick?

Chorus:

Fluoride, fluoride
Will poisoning the well be our legacy?
Fluoride, fluoride
Oh, it's time to wake up and see.

For fluoride for many means sickness
It's waking with no energy
For fluoride for many means sickness
It's chronic fatigue to a T.

For fluoride can lead to arthritis
The aching of shoulder and knee
The jaw and the back and the pelvis
A pain in the neck it can be.

For fluoride's not good for the tummy
A pain in the gut it can be
With bloating, diarrhoea, constipation
Just living becomes misery.

For fluoride's not good for the thinking
Brain fog and confusion take hold
With fluoride the memory goes missing
And we forget what we've been told.

So why force this fluoride upon us?
Why not let it stay in the ground?
Just study the subject in detail
You'll find fluoridation's unsound.

D **7. So try to stay till the job is done**
(Tune: Banks of the Ohio)

I started off, a job to do
To get rid, of you know who
'Twas clear to me, it had to go
But those in charge, didn't want to
know.

Chorus:

So try to stay, till the job is done
But along the way, have little fun
It's a marathon, we have begun
But the day will dawn, when the race
is won.

Let's not forget, what wise ones say
Rome wasn't built, in just a day
While it's our watch, let's trim the sail
And ⁱⁿ the end, truth will prevail.

G **8. The case against fluoride**
(Tune: Beautiful, beautiful brown eyes)

What do we want in our water?
What do we want there to taste?
What do we want in our water?
One thing's for sure it's not waste.

What keeps the F in our water?
Poisoning ourselves — it is mad
What keeps the F in our water?
Science that has been done bad.

When politics are too powerful
When just a few have the power
When politics are too powerful
Bad tastes are left that are sour.

What is the case against fluoride?
Why should we take one more look?
What is the case against fluoride?
Well now, it's all in a book.
