

Association between total daily fluoride intake (TDFI) and age of infants living in fluoridated-water (0.97 mg F/L) and non-fluoridated-water (0.19 mg F/L) areas.

▲ High-F area  
● Low-F area

48-h circadian profiles of urinary aMT6s (mean  $\pm$  SEM) excreted by 12 low-F males and 12 low-F females aged 11½ weeks. Black horizontal bars indicate periods of darkness. LD:12 12

## Relative

Comparison of 48-h profiles of urinary aMT6s (mean  $\pm$  SEM) excreted by 11 high-F male and 12 high-F female gerbils aged 11½ weeks.
